

ROCKET RACK® FLAT

ROCKET RACK® Flat is used for vertical or horizontal pipe runs along the wall. It is mounted off the wall several inches using ROCKET ROD™ for easy access during cleaning. ROCKET RACK® Flat can also be used with the ROCKET RACK® Post Mount System. Patented slot design allows for additional lines to be added at a future time and assures a perfectly straight run, creating a beautiful installation, suitable even for high-end residential or commercial buildings. Pipe and conduit are secured with ROCKET RACK U-Bolts or ROCKET STANDOFFS™ and approved sanitary clamps. Made from 2x1/4 Flat Stock with radius corners for added safety.

ROCKET RACK® Flat IS FOR WALL AND POST MOUNT INSTALLATIONS ONLY. NEVER HANG FLAT STOCK TRAPEZE STYLE.

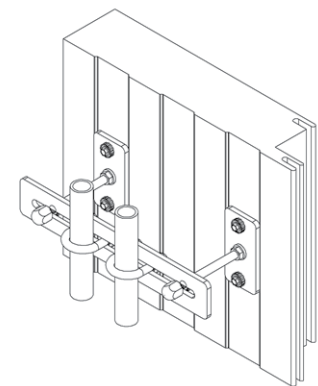

Length (in inches) refers to overall length of the rack, NOT to the length of the slot. Racks can be fabricated to custom lengths. Let us know the center-to-center distance between mounting holes. Call for pricing and lead time on lengths not listed here or racks made from 316 Stainless.

Flat rack is also available in slot only configuration (no dedicated mounting holes). Slot only flat rack can be installed like regular flat rack (with Rocket Rod or with Post Mount). Slot Only allows more flexibility in support alignment by being able to install and secure at different points along the slot. ROCKET RACK® Flat can be installed using a Serrated Flange Nut, a Beveled Cap Nut and ROCKET ROD™, ALL SOLD SEPARATELY.
